Description

Preconditions

- The Hotel Booking API is running.
- The API expects the check-in date in the `YYYY-MM-DD` format.

Steps to Reproduce

1. Send a `GET` request to:
   `http://localhost:3001/reservations?checkIn=2014/05/21`

Expected Result

The API should reject the invalid date format and return: `400 Bad Request`

No reservation IDs should be returned.

Actual Result

The API accepts the invalid date format and returns reservation ID(s) with: `200 OK`
