Description

According to the API requirements, any invalid login attempt must return `401 Unauthorized` with the response body {{ {"reason":"Bad credentials"}

}}.

The API currently returns `200 OK` for invalid credentials.

Environment

- macOS Sonoma Version 14.5
- Google Chrome Version 150.0.7871.187
- `http://localhost:3001`
- POST `/login`

Preconditions

- API is running.
- `/login` endpoint is available.

Steps to reproduce

1. Send a POST request to:
   `http://localhost:3001/login`
2. Set `Content-Type: application/json`.
3. Use invalid credentials.
4. Send the request.

Expected result

- HTTP status: **401 Unauthorized**
- Response body: `"reason": "Bad credentials"`
- No authentication token is returned.

Actual result

- HTTP status: **200 OK**
- Response body: `"reason": "Bad credentials"`
- No token is returned.
